Tetra Dynamics' Cast Partial Department. Adding Artistry to the Science and Function of Dentistry

WEST BABYLON, NY – JANUARY 2014: Tetra Dynamics' specialized capabilities for complex cast partial and combination cases are requested by top prosthodontists and leading university hospitals throughout the U.S. and the world. Bill Wiechert, Tetra Dynamics' Cast Partial Frame Department manager, has nearly 40 years of experience in the business.

Bill began working alongside his father at the age of 15 and he has a family history in the industry that spans generations—over 100 years.

Wiecherts' grandfather, George, was a pioneer in producing materials for use in fabrication of cast frameworks. He invented duplicating materials incorporating "agar" derived from seaweed, which was patented and used during World War I to produce artificial limbs.

George Wiechert was also the founder of Wiechert Dental Lab which was eventually managed by his three sons, and later sold to McAndrews Northern Laboratory. Many of Bill's family members have worked in the lab at one time or another. In fact, his mother Victoria, a talented artist, created illustrations that became the foundation for various cast display cases. One could say that this business runs in his family's blood. With Wiechert's rich family heritage in this line of work, he is truly a unique asset to the company.

Tetra Dynamics' Cast Partial and Frame Department produces work that is extremely labor intensive. Bill Wiechert draws on his 40 plus years of skill and experience for the best possible results. His meticulous attention to detail, utilizing the principles of physics, ensures each and every piece exhibits optimum fit and function, featuring the least amount of torque in order to preserve the patients remaining teeth.

Today, many companies outsource this type of work overseas or to other labs. Tetra Dynamics is one of the few remaining labs that performs this work and specializes in the various types of attachments on the market.

Tetra's Cast Partial Frame Department will strive to add artistry to the science and function of dentistry for many years to come.
