### Tetra Dynamics, Inc. Is Now a Certified Vendor For The Myerson EMA Oral Appliance

WEST BABYLON, NEW YORK—August 27, 2013. [Tetra Dynamics, Inc.](#), a full-service [dental laboratory servicing the eastern United States](#) is now a certified provider of the [EMA Oral Appliance](#). The Myerson Elastic Mandibular Advancement (EMA) appliance is a simple, patient-friendly oral appliance created for non-invasive treatment of snoring and OSA. The design is simple, extremely stable and allows for adjustability through the interchangeable elastic straps.

The EMA is formed from a dental impression and resembles and fits like a retainer. The primary treatment mechanism of opening the bite and gently moving the mandible forward is achieved with the use of occlusal bite pads and the interchangeable elastic straps that offer varying degrees of mandibular advancement. This positioning of the mandible causes a forward movement of the tongue, reopening the air flow through the oral pharynx (back of the throat). The flexibility of these elastic straps provides unsurpassed lateral movement and overall TMJ comfort.

Larry Borman, president of Tetra Dynamics stated, “We researched several types of oral appliances to be used for the prevention of snoring and found the EMA Oral Appliance to be a very durable, comfortable product designed by a respected company in the dental industry. We are proud to be a certified vendor and look forward to working with many doctors to help their patients achieve better sleep through the use of this product.”
