

# ZirCap™

## Full Contour Zirconia

### For Unmatched Quality And Esthetics, Try ZirCap.

ZirCap is an excellent alternative for PFMs and perfect for posterior singles and bridges. It continues to prove itself with our customers as a consistent fitting, strong and esthetic product with virtually no chipping because it is monolithic.

ZirCap features excellent esthetics—even better than BruxZir. Tetra Dynamics utilizes a multicolor infusion process that significantly enhances the color matching capabilities.

From a scanned image, our expert technicians will provide you with greater restorations. The digital file gives us consistent dimensional control of the contours, margins, contacts and occlusion.

#### ZirCap at a glance:

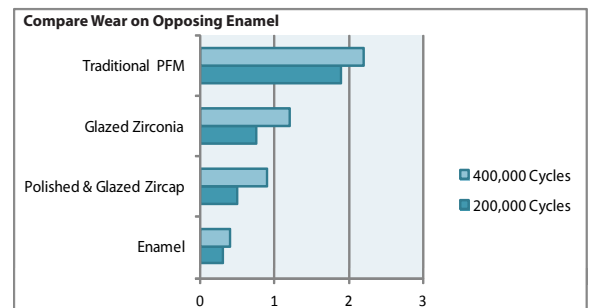

- Lifetime guarantee against breakage for your peace-of-mind.
- Chip Resistant; perfect for patients who present with excessive wear.
- Less wear to adjacent teeth than PFMs; no need to compromise.
- Over 1000 MPa flexural strength facilitates a long product life.
- Monolithic; all one material for superior strength.
- Competitive pricing: ZirCap is a real value!
- Margins are exact, facilitating excellent fit and faster seat times.

#### Indications

- Full contour zirconia for crowns and bridges up to 4 units.
- Great product for replacement of full gold crowns and PFMs.
- On top of implant abutment.

#### Technical Specifications

- Flexural strength - over 1000 MPa.
- Conventional or adhesive cementation.

Multiple clinical studies show full zirconia restorations, such as ZirCap, to be kinder to surrounding and opposing dentition than conventional PFM's.
