

MicrO₂™ Sleep Apnea Device by MicroDental Laboratories –Introduces Warranty & Find A Doctor Website Feature

San Francisco, CA, November 1, 2015 – MicroDental Laboratories is now offering a 3 year warranty for the MicrO₂™ Sleep Device. The MicrO₂ is the first CAD/CAM milled device made from control cured PMMA, (details of the warranty can be found at: www.micro2sleepdevice.com/terms-conditions). The MicrO₂'s comfortable profile and ease of use have positioned the MicrO₂ Sleep and Snore Device as a popular choice amongst doctors and patients to treat OSA, and as an exciting new alternative to CPAP Therapy. Also new for MicroDental is the **Find a Doctor** search engine enabling MicrO₂ prescribing dentists to be featured on the Micro2SleepDevice.com website as a Preferred Provider.

“The MicrO₂ Sleep Device is proving itself, not only as an innovative sleep device, but a durable one as well. So in only one year after launch, we feel very good about extending our warranty from 2 to 3 years,” commented David Kuhns, MicroDental’s Sr. Director of Product Development & Technical Sales. “Additionally, the popularity of the device has doctors across the country prescribing the MicrO₂, giving us the momentum and coverage to launch our **Find a Doctor** search engine to better help patients and MicrO₂ doctors connect.”

Featuring a patent pending design and a precision milling production process, the MicrO₂ is able to utilize a PMMA material that is cured under controlled conditions. These aspects allow the MicrO₂ to be small yet strong, precise, and predictable. The MicrO₂ also features a unique approach to titration that is intended to make the device easier to use for the dentist and the patient.

“MicrO₂ Dental Sleep Appliance simply stands out in durability and comfort,” noted Dr. Jerry Hu. “The reason is that credentialed engineers created this device using advanced materials and design specifications, such as the unique rounded fins, and the latest in digital CAD/CAM technology. Backed by a 3 year warranty, the MicrO₂ Sleep Device is unparalleled to any other Dental Sleep Device on the market.”

“They say time is money. How much is our patient’s time is worth? How much is our time is worth? Well here is a product in dentistry, a Mandibular Advancement Device that has unique and unmatched qualities. It not only respects physiology of respiration, but also has the possibility of a very fast replacement without the need of a new impression. Save time, save money, and save lives with MicrO₂,” stated Dr. Sahag Mahseredjian.

All dentists currently prescribing the MicrO₂ Sleep Device are eligible to be listed in the Micro2SleepDevice.com site search engine under “Find A Doctor.” This “Find A Doctor” feature is found at the top of the home page and can be used by consumers to locate their nearest MicrO₂ Sleep Device doctor. This will help bring recognition and participation of these doctors to the consumers seeking treatment to OSA and CPAP alternatives. Dentist can opt-in simply by filling out the “Join Doctor List” under the “Doctors’ option in the navigation bar.

“Creating awareness and making it simple for patients to connect with Sleep Doctors is an important step in getting more patients diagnosed,” noted Dr. Michael Gelb. “Every little bit helps and this is in line with our 85/45 initiative to bring the percent of patients undiagnosed from 85% down to 45%, the MicrO₂ certainly will help us meet this goal.”

About MicroDental Laboratories

MicroDental Laboratories is one of the leading dental laboratories, servicing dental practices in the United States, Canada, and other parts of the world.
